1. Claims 1-43 are presented for examination.

2. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

3. Claim 1 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The method of automatically configuring a microprocessor architecture as recited does not utilize any physical element and can be performed mentally on a piece of paper, and thus falls under the non-statutory subject matter. See "Interim Guidelines for Examination of Patent Applications for Subject matter Eligibility", Section (IV)(C)(3) and ANNEX V.

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 1-43 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

(a) Claim 1, the single method step of "using executable code of another type of microprocessor to automatically adapt the instruction set" is an abstract statement and does not indicate any procedural step, and it is not clear what specific physical processes are performed.

(b) Claim 43, apparatus claim does not recite any functional element.

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

7. Claims 1 and 43 are rejected under 35 U.S.C. 102(e) as being anticipated by Killian et al, U.S. Patent No. 6,477,683.

Killian et al teaches the invention as claimed in claims 1 and 43 including a method of configuring a microprocessor architecture, comprising the step of using executable code for another type of microprocessor (col. 6, line 53) in order to automatically adapt the instruction set of the microprocessor architecture (col. 6, line 55) at design time in dependence on the requirements of the executable code (col. 6, line 61).

8 The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Matsumoto et al taught a method of generating a microprocessor development environment for a selectively configured microprocessor.

Art Unit: 2111

Wilson et al taught a method of designing selectively configured microprocessor instructions.

Wang et al taught a method of selecting features for configured microprocessor.

Matsui et al taught a method of designing an application optimal processor.
